

Tamar Nidam | Senior Software Engineer

Specializing in Distributed Systems, High-Performance Computing & Software Infrastructure

Tamar.Nidam1@gmail.com | [GitHub](#) | [LinkedIn](#) | [0508548539](tel:0508548539)

Professional Profile

Senior Software Engineer with specialized in the design and optimization of mission-critical distributed systems. Expert in **Parallel Computing**, **Multithreading**, and **Performance Tuning** (CPU/Memory/Cache). Deeply experienced in multi-server architecture and high-scale data traffic. Passionate about **Generative AI**, actively self-learning and experimenting with emerging technologies (PyTorch, LLMs). A dedicated team player who brings positive energy, empathy, and a constant drive for innovation and excellence.

Technical Skills:

Languages: C# .NET (Expert), Python (Proficient / PyTorch), C++ (Prior experience), SQL, JavaScript.

Infrastructure: Distributed Systems, Parallel Computing, Multi-server Architecture, Low-latency Systems.

Tools: Docker, CI/CD Pipelines, GCP, Git, Jira, Networking Protocols.

Core Expertise: Performance Profiling, Memory Management, Async Programming, Complex Algorithms.

Professional Experience

Senior Software Engineer | Defense Environment (IDF Civilian Employee) | 2024 – Present

System Architecture: Designed and developed complex distributed systems using **C# .NET** within operational production environments.

Performance Optimization: Optimized system performance by implementing advanced **Multithreading** and **Async** patterns, resulting in significant latency reduction and improved resource utilization.

Scalability & Reliability: Engineered multi-server architectures to manage massive data traffic and real-time processing, ensuring high availability and system resilience.

Data-Driven Leadership: Led technological decision-making processes based on data analysis to enhance system efficiency and throughput.

Leadership & Teamwork: Mentored developers, conducted rigorous Code Reviews, and led end-to-end projects with a broad systemic and product-oriented perspective.

Execution: Thrived in dynamic, high-pressure environments, meeting strict deadlines through effective multitasking and high-level analytical thinking.

Education & Training

Gama - MAMS Course | Elite Technology Unit, IDF | 2024: Advanced training in Full-Stack development and complex technological projects, with a strong focus on efficiency, performance, and code quality.

Software Engineering (Mahat): Technological College Diploma.

Lev Academic Center (JCT): Integrated degree-level courses program.

Google Cloud DevOps Bootcamp: Reichman University & Google (Hands-on experience with GCP, automated pipelines, and CI/CD).

Core Values & Interpersonal Strengths

Self-Learning & Innovation: Technology enthusiast committed to continuous growth, regularly exploring new models and frameworks (Exploration Mindset).

Team Collaboration: Strong believer in synergy and high-level interpersonal communication; dedicated to supporting peers with a positive and empathetic approach.

Interpersonal Excellence: Known for maintaining a pleasant demeanor and injecting positive energy into the team, even during intense workloads.
