

Tamar Nidam | Senior Software Engineer

Backend & High-Scale Distributed Systems

Tamar.Nidam1@gmail.com | [GitHub](#) | [LinkedIn](#) | [0508548539](tel:0508548539)

Professional Profile

Senior Software Engineer with extensive experience in developing mission-critical backend services within complex defense environments. Expert in distributed systems, parallel computing, and large-scale data processing (**Kafka**). Proven ability in designing resilient architectures and diagnosing complex, non-reproducible system-level bugs. A dedicated team player with a **"Security-First"** mindset, bringing empathy, positive energy, and a high commitment to innovation and excellence.

Technical Skills:

Languages: C# .NET (Expert), Python, SQL, JavaScript (React, Node.js).

Infrastructure & Data: Distributed Systems, Multi-server Architecture, High-Availability, Low-latency.

Tools: Docker, CI/CD Pipelines, GCP, Git, Jira, Networking Protocols, System Monitoring.

Core Expertise: Performance Profiling, Memory Management, Async Programming, Complex Algorithms.

Professional Experience

Senior Software Engineer | Defense Environment (IDF Civilian Employee) | 2024 – Present

Backend & Scalability: Designed and developed complex distributed systems in **C# .NET**, managing diverse and high-scale data traffic using **Kafka**.

System Resilience & Security: Implemented critical components focusing on high reliability, accuracy, and rigorous security standards.

Optimization & Architecture: Significantly improved throughput and system resource utilization (CPU/Memory/Cache) while maintaining a **modular design** for seamless maintenance and scalability.

End-to-End Solutions: Developed integrated cloud services and client-side components in **React**, ensuring continuous operation under heavy loads and high concurrency.

Complex Problem Solving: Diagnosed and resolved architectural bottlenecks and "non-reproducible" bugs within multi-network production environments.

Leadership & Mentorship: Led technical initiatives with **End-to-End Ownership**, mentored developers, and conducted rigorous Code Reviews to elevate code quality and systemic thinking.

Education & Training

Gama - MAMS Course | Elite Technology Unit, IDF | 2024: Advanced training in complex systems architecture and Full-Stack development, emphasizing efficiency and security in high-pressure environments.

Software Engineering (Mahat): Technological College Diploma.

Lev Academic Center (JCT): Integrated degree-level courses program.

Google Cloud DevOps Bootcamp: Reichman University & Google (Practical experience in GCP, pipeline automation, and CI/CD.).

Values & Strengths

SAnalytical Resilience & Ownership: High capacity for deconstructing ambiguous problems into actionable solutions while taking full responsibility for the outcome.

Self-Learning & Innovation: Technology enthusiast committed to continuous growth and experimenting with new tools and frameworks (**Exploration Mindset**).

Team Synergy: Positive and empathetic approach, maintaining team morale even during intense workloads and operational cycles.
